ABOUT

Principal engineer with fifteen years of experience building distributed systems, developer tooling, and the release infrastructure that keeps them shipping.

WORK EXPERIENCE

Northwind Systems

Raleigh, NC March 2019 – Present

Principal Software Engineer

Logistics software for regional carriers

Technical lead for the platform group that owns build, release, and observability tooling.

- Cut median CI wall-clock time from 42 minutes to 9 by introducing remote build caching.
- Designed the multi-region failover strategy now used by all customer-facing services.
- Mentored six engineers, three of whom were promoted to senior within two years.

Contoso Analytics

June 2014 – February 2019

Senior Software Engineer

Built and operated the ingestion pipeline behind the company's real-time analytics product.

- Scaled event ingestion from 12K to 400K events per second.
- Replaced a nightly batch job with a streaming implementation, reducing data latency to under a minute.

EDUCATION

Georgia Institute of Technology

May 2014

Master of Science

Computer Science

GPA 3.9

- CS 6210 - Advanced Operating Systems
- CS 6250 - Computer Networks
- CS 6300 - Software Development Process

University of North Carolina

May 2012

Bachelor of Science

Computer Science

GPA 3.7

- COMP 410 - Data Structures
- COMP 550 - Algorithms and Analysis

VOLUNTEER EXPERIENCE

Code for the Triangle September 2020 – May 2023
Technical Mentor

- Mentored volunteer developers building civic technology for local nonprofits.
- Led a twelve-week curriculum on version control and code review.
 - Shipped a volunteer-scheduling application used by four regional food banks.

PROJECTS

Ledger January 2021 – June 2023
Northwind Systems
application

- Author
- Maintainer

- An append-only event store that guarantees exactly-once delivery to downstream consumers.
- Adopted by three teams within a year of its first release.
 - Sustains 250K writes per second on commodity hardware.
- Rust · Raft · gRPC

The Cost of a Build 2022
talk

A conference talk on the compounding cost of slow feedback loops in continuous integration.

AWARDS

Northwind Systems November 2022
Engineering Excellence Award

Awarded annually to one engineer for sustained impact on company-wide technical infrastructure.

International Conference on Software Engineering April 2018
Best Paper, Industry Track

Recognized for the paper describing Contoso's incremental stream-processing architecture.

CERTIFICATES

Cloud Native Computing Foundation February 2023
Certified Kubernetes Administrator

Amazon Web Services

AWS Certified Solutions Architect - Professional

PUBLICATIONS

ACM Queue

April 2018

Incremental Stream Processing at Scale

A practitioner's account of migrating a batch analytics pipeline to a streaming architecture.

IEEE Software

July 2021

Reproducible Builds for Polyglot Repositories

Techniques for achieving bit-identical build artifacts across heterogeneous toolchains.
