📁 WORK EXPERIENCE

Northwind Systems

March 2019 – Present

Principal Software Engineer

Technical lead for the platform group that owns build, release, and observability tooling.

- Cut median CI wall-clock time from 42 minutes to 9 by introducing remote build caching.
- Designed the multi-region failover strategy now used by all customer-facing services.
- Mentored six engineers, three of whom were promoted to senior within two years.

Contoso Analytics

June 2014 – February 2019

Senior Software Engineer

Built and operated the ingestion pipeline behind the company's real-time analytics product.

- Scaled event ingestion from 12K to 400K events per second.
- Replaced a nightly batch job with a streaming implementation, reducing data latency to under a minute.

🎓 EDUCATION

Georgia Institute of Technology

May 2014

Master of Science

Computer Science

GPA 3.9

- CS 6210 - Advanced Operating Systems
- CS 6250 - Computer Networks

- CS 6300 - Software Development Process

University of North Carolina

May 2012

Bachelor of Science

Computer Science

GPA 3.7

- COMP 410 - Data Structures
- COMP 550 - Algorithms and Analysis

♥ VOLUNTEER EXPERIENCE

Code for the Triangle

September 2020 – May 2023

Technical Mentor

Mentored volunteer developers building civic technology for local nonprofits.

- Led a twelve-week curriculum on version control and code review.
- Shipped a volunteer-scheduling application used by four regional food banks.

🏆 AWARDS

Northwind Systems

November 2022

Engineering Excellence Award

Awarded annually to one engineer for sustained impact on company-wide technical infrastructure.

International Conference on Software Engineering

April 2018

Best Paper, Industry Track

Recognized for the paper describing Contoso's incremental stream-processing architecture.

📄 PUBLICATIONS

ACM Queue

April 2018

Incremental Stream Processing at Scale

A practitioner's account of migrating a batch analytics pipeline to a streaming architecture.

IEEE Software

July 2021

Reproducible Builds for Polyglot Repositories

Techniques for achieving bit-identical build artifacts across heterogeneous toolchains.
