👤 ABOUT

Principal engineer with fifteen years of experience building distributed systems, developer tooling, and the release infrastructure that keeps them shipping.

🔗 SKILLS

Python

asyncio pydantic pytest

Distributed Systems

consensus sharding observability

Rust

tokio serde

Terraform

modules

Kubernetes

operators helm

📌 WORK EXPERIENCE

- **Northwind Systems**
Principal Software Engineer
Logistics software for regional carriers
Technical lead for the platform group that owns build, release, and observability tooling.
 - Cut median CI wall-clock time from 42 minutes to 9 by introducing remote build caching.
 - Designed the multi-region failover strategy now used by all customer-facing services.
 - Mentored six engineers, three of whom were promoted to senior within two years.

RALEIGH, NC MARCH 2019 - PRESENT
- **Contoso Analytics**
Senior Software Engineer
Built and operated the ingestion pipeline behind the company's real-time analytics product.
 - Scaled event ingestion from 12K to 400K events per second.
 - Replaced a nightly batch job with a streaming implementation, reducing data latency to under a minute.

JUNE 2014 - FEBRUARY 2019

EDUCATION

- 

Georgia Institute of Technology
Master of Science
Computer Science
GPA 3.9
 - CS 6210 - Advanced Operating Systems
 - CS 6250 - Computer Networks
 - CS 6300 - Software Development Process

ATLANTA, GA MAY 2014
- 

University of North Carolina
Bachelor of Science
Computer Science
GPA 3.7
 - COMP 410 - Data Structures
 - COMP 550 - Algorithms and Analysis

MAY 2012

VOLUNTEER EXPERIENCE

- 

Code for the Triangle
Technical Mentor
Mentored volunteer developers building civic technology for local nonprofits.
 - Led a twelve-week curriculum on version control and code review.
 - Shipped a volunteer-scheduling application used by four regional food banks.

DURHAM, NC SEPTEMBER 2020 - MAY 2023

PROJECTS

- 

Ledger
Northwind Systems
application
 - Author
 - MaintainerAn append-only event store that guarantees exactly-once delivery to downstream consumers.
 - Adopted by three teams within a year of its first release.
 - Sustains 250K writes per second on commodity hardware.

Rust

Raft

gRPC

JANUARY 2021 - JUNE 2023
- 

The Cost of a Build
talk
A conference talk on the compounding cost of slow feedback loops in continuous integration.

2022

AWARDS

- 

Northwind Systems
Engineering Excellence Award
Awarded annually to one engineer for sustained impact on company-wide technical infrastructure.

NOVEMBER 2022
- 

International Conference on Software Engineering
Best Paper, Industry Track
Recognized for the paper describing Contoso's incremental stream-processing architecture.

APRIL 2018

CERTIFICATES

-  Cloud Native Computing Foundation
Certified Kubernetes Administrator
-  Amazon Web Services
AWS Certified Solutions Architect – Professional

FEBRUARY 2023

PUBLICATIONS

-  ACM Queue
Incremental Stream Processing at Scale
A practitioner's account of migrating a batch analytics pipeline to a streaming architecture.
-  IEEE Software
Reproducible Builds for Polyglot Repositories
Techniques for achieving bit-identical build artifacts across heterogeneous toolchains.

APRIL 2018

JULY 2021
